

## Florence with Purpose

With a Specific Business Need in Mind, Work with TruQua’s Experts to Identify Opportunities and Seamlessly Integrate Machine Learning into Core Business Systems

### Streamlined

Easily deploy Machine Learning applications on existing systems - ECC, BW, HANA, Cloud Solutions, and more

### Integrated

Simplified deployment process encourages constant collaboration and feedback between data scientists and business analysts, facilitating the rapid iterative development necessary for ML

### Rapid

Florence is designed to integrate seamlessly with your existing systems and processes. Harnessing the power of Machine Learning without disrupting landscape or process.

### The Challenge

Having a specific business process in mind, companies face two unique challenges during their first Machine Learning project. First, breaking down the given process into potential opportunities through data analysis. Second, integrating an ML algorithm into the business process so that the business can reap the benefits of Machine Learning.

### The Solution

TruQua’s three step process helps new customers design, develop and deploy their first Machine Learning model in a matter of 5 weeks.

Utilizing Florence by TruLabs, customers can now take advantage of a simplified deployment process that encourages constant collaboration and feedback between data scientists and business analysts enabling more rapid and iterative model development. Florence takes ML beyond limited analysis on past data and incorporates ML directly into core business processes

### The Process

- Initial iterative development of a robust ML model
- Deployment-ready models are deployed into Florence to integrate with business data from source systems
- Florence automatically provisions the Machine Learning server and generates the necessary connection points. Florence provides pre-generated code snippets to connect to your model via ABAP, HANAXS and Fiori

## Contact TruQua Today to Take the First Step

Work with TruQua’s team of data scientists to create and deploy Machine Learning models that are custom to your business and integrated with existing business systems. A full license for Florence will be provided, free of charge, during the project phases and extending two weeks past the engagement for initial customer testing. Project phases for a Florence deployment include:
